

## HOW TO EXCHANGE PICTURES IN THE DLL FILE

You need to download the free application RESOURCE HACKER (<http://www.angusj.com/resourcehacker/>)

Resource Hacker is available also without installation. Just unpack it on your desktop and you can launch it.

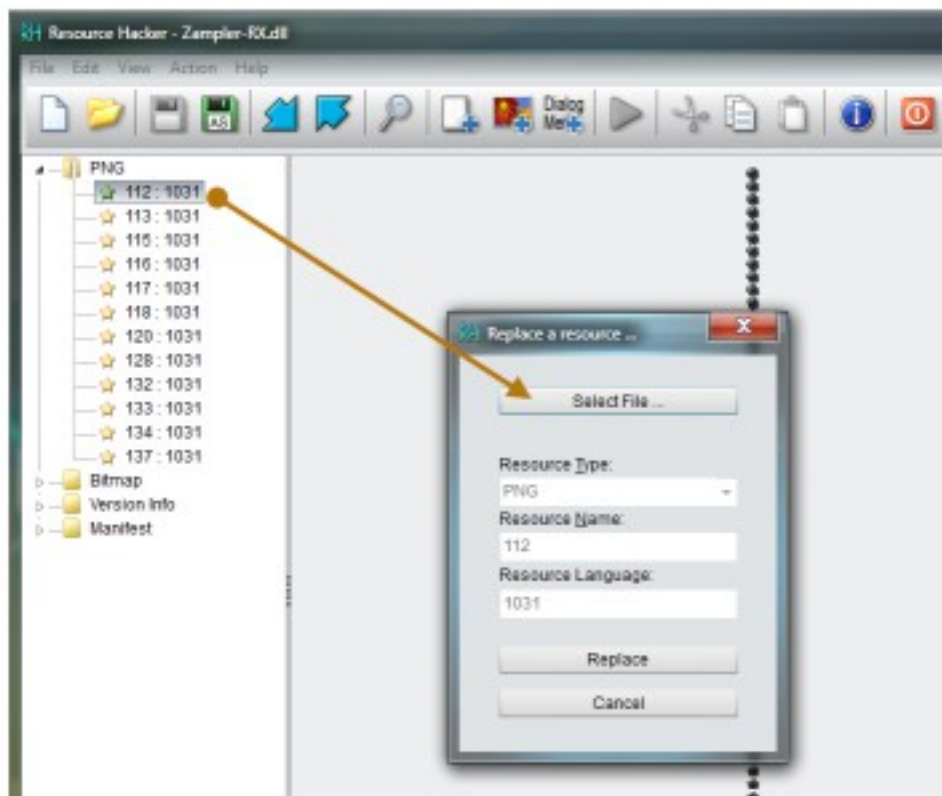

**At PNG format to choose the option Replace Resource...**

You need to exchange only pictures from the folders PNG and BMP. Some pictures in DLL are not used already, so there is not need to exchange them.

Just be careful at format and numbers.

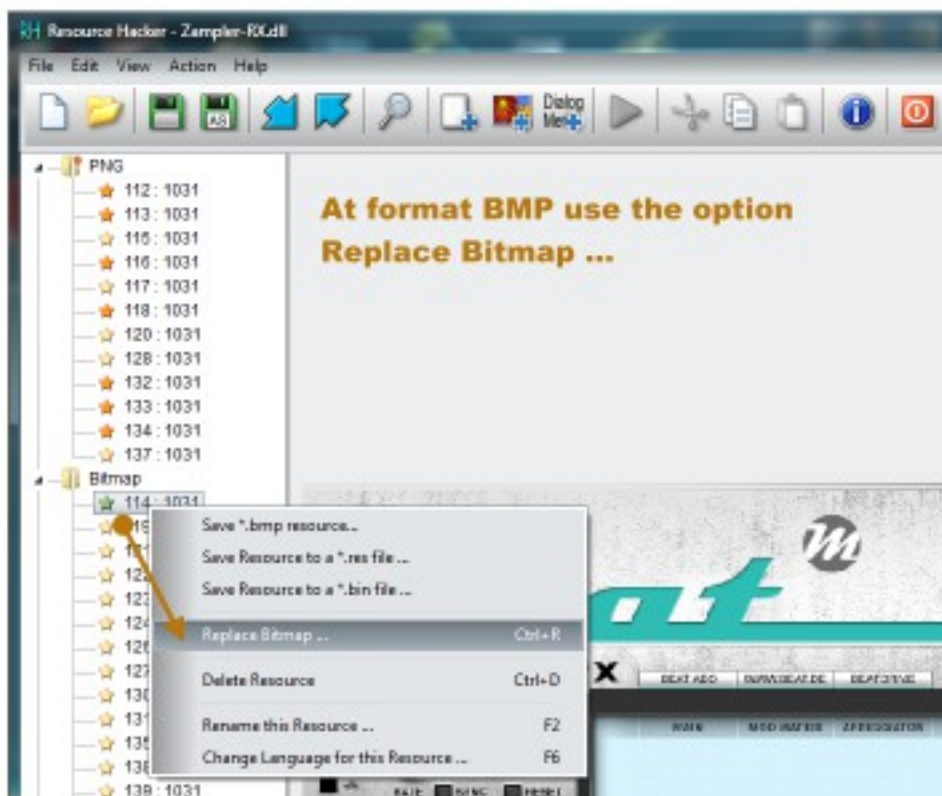

Into source PNG you can load only PNG format.  
Into source Bitmap you can load only BMP format.

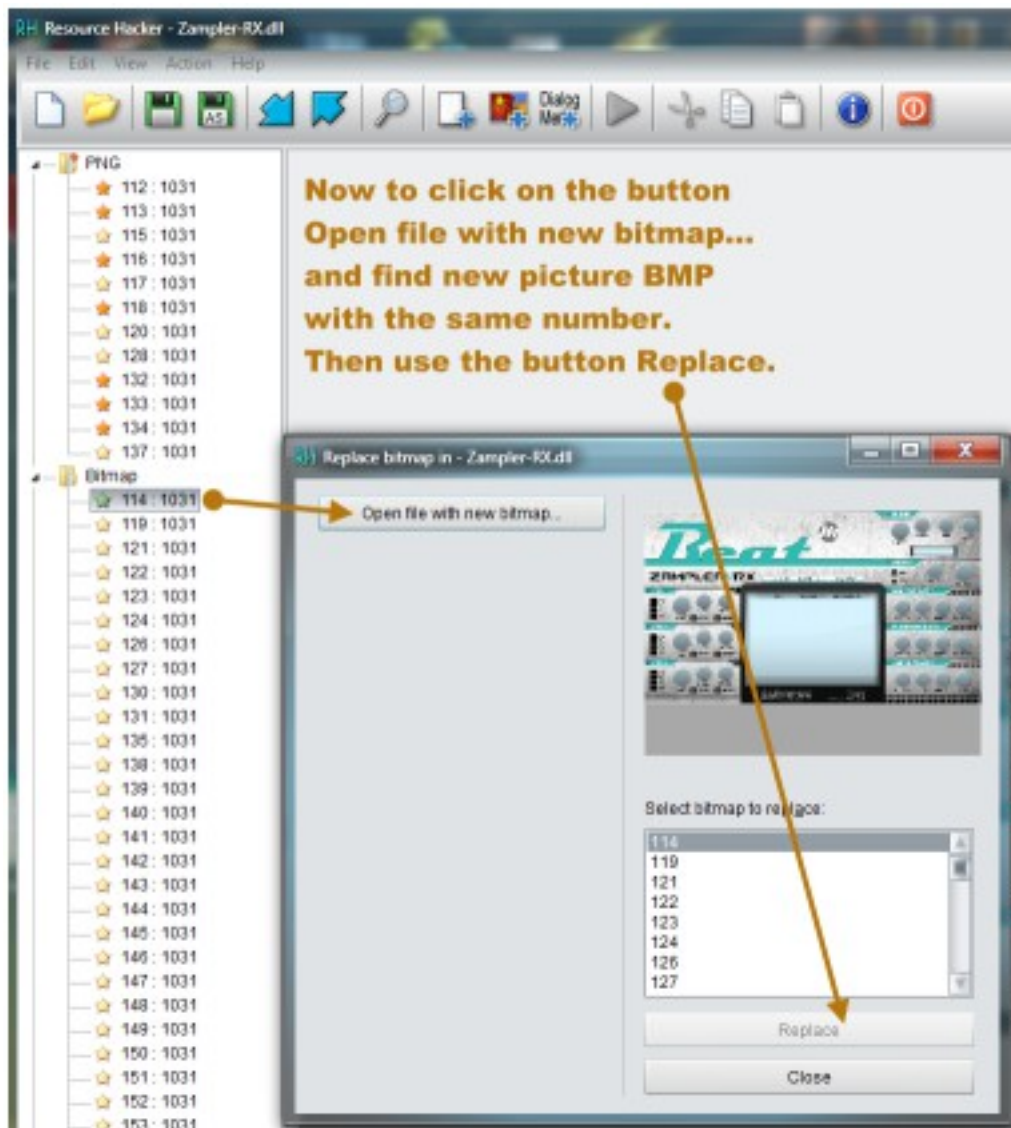

**Use the button Select File ... and in next window find new PNG picture with the same number. Then use the button Replace.**

Always to exchange the correct number of picture.

After you exchanged all PNG files, now you need to exchange all bitmaps – BMP format.

**When all pictures are exchanged,  
just click on the button SAVE ....**

Last step saves the new DLL file – original file is marked like „original“.
